Dean Rosenthal

Perfect for ...

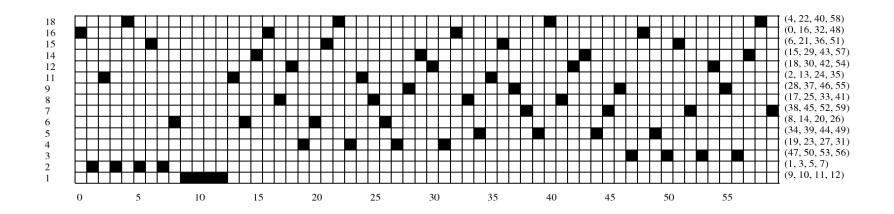

To Jean-Paul Davalan

2011/rev. 2012

For solo violin:

Perfect for ... [name of performer] is a piece about tiling, or, more specifically, a perfect tiling, length 60, of four evenly spaced points or notes. This means that the music is composed of 15 rhythmic motifs of four notes each at different speeds (or intervals) that fit together like puzzle pieces to fill a continuous rhythmic line with no gaps or rests 60 beats long.

For example, the first tile enters as an eighth note F, followed by 15 beats of eighth rests, followed by another F, and so on, until four evenly spaced points (or notes) have been stated and separated by the correct number of rests. This completes one tile of four evenly spaced notes. As the additional 14 tiles are introduced, always with different intervals (or speeds), the melodic line slowly becomes filled in with notes replacing rests. The completed tiling is what is called a "perfect" tiling because it succeeds in covering all the points of the melodic line.

The piece is dedicated to the French music theorist Jean-Paul Davalan who assisted me in my understanding of rhythmic tiling and who provided the solution to the question of whether or not there existed a perfect four note rhythmic tiling. Additionally, Pauline Kim Harris provided a very helpful suggestion.
